

Munich, 7 October 2013

Inter Airport Europe 2013: Selex ES displays efficient and sustainable intelligence-led airport solutions.

Selex ES, a Finmeccanica company, is an international leader in electronic and information technologies for defence systems, aerospace, data, infrastructures, land security and protection and sustainable 'smart' solutions. With systems installed in more than 150 countries, the company provides airport operators with a single entity of proven expertise to deliver integrated modular airport solutions that improve efficiency while enhancing the passenger's experience.

Thanks to its capabilities in automation, IT services, security and safety, Selex ES offers solutions in the areas of Air Traffic Management, Baggage Handling, secure communications, and security.

Part of the offer presented this year, is the new interactive multi-touchscreen demo showing how the company can support a **Smart Airport**.

In addition to traditional airport solutions, Selex ES offers smart mobility, security, energy management, logistics and ICT solutions: The company is therefore capable of delivering a fully operational airport system based on the fast and modular development of integrated airside and landside systems.

The company is at the forefront in integrated management of both the physical processes and information flows related to baggage handling, ranging from baggage check in automation, through handling complex baggage flows and identification, to flight information systems. As testimony of the company's achievements in this field, Selex ES has recently been awarded a contract to supply a baggage handling system for Paris-Orly airport.

At Inter Airport, the company will also exhibit the **MBHS** (Multi-sorting Baggage Handling System) and **MTTS** (Multi-sorting Tilt-Tray System).

One of the most advanced, high-performance baggage handling systems on the market, Selex ES's MBHS system is at the heart of the Net6000 transit baggage handling system in Rome Fiumicino airport and helped the airport achieve IATA's Award for Improvements in Service Quality in 2011.

MTTS is the Selex ES sorter proposal based on the innovative Direct Drive Tilting Motion Technology that allows increased sorting accuracy while drastically reducing energy consumption and maintenance costs.

Come and visit us at the Selex ES stand: Hall B5; stand 1318.
